+91 8765060836 | pulkit123dhingra@gmail.com | [LinkedIn](#) | [Portfolio](#) | [Blog](#) | [GitHub](#) | [Hugging Face](#) | [Coding](#)  
📍 Chennai, India

Versatile technologist with expertise in Python, R and Java, complemented by hands-on experience in Terraform and cloud platforms (AWS, GCP, Azure). Skilled in designing and implementing scalable applications, dashboards and end-to-end pipelines, leveraging CI/CD, containerization, and automation to streamline development workflows. Proven ability to translate business requirements into robust technical solutions, collaborate effectively with cross-functional teams, and mentor peers. Enthusiastic about continuous learning, exploring emerging technologies, and fostering a collaborative, high-impact work environment.

## EDUCATION

University of Bristol, Bristol, United Kingdom Nov 2025  
Msc Data Science

- Awarded Distinction Grade for overall academic performance.
- Conducted comprehensive analysis of energetic particle measurements from meteorological balloon flights performing data extraction and instrument corrections, generating altitude and latitude-dependent flux profiles, applying solar-cycle and atmospheric adjustments, and correlating results with satellite observations.
- Completed research project that includes analysis of spectroscopical result of crop plant for nutrient estimation using Machine Learning and Deep Learning based models.

Dr A.P.J Abdul Kalam Technical University, Lucknow, India Jun 2022  
Bachelor of Technology Computer Science

- Maintained a GPA of 7.9/10, demonstrating a strong understanding of the material and a dedication to academic excellence.
- Secured first place in the annual coding and machine learning competition by building an end-to-end software solution including data ingestion pipelines and RESTful APIs and fine-tuning ML models for peak performance.

## WORK EXPERIENCE

Ford Motor Company (2+ years)  
AI Engineer, Chennai Jan 2026 - Present

- Built agentic AI solutions to support service advisors in their daily work, integrating multiple backend systems and internal data sources into a unified agentic platform to surface vehicle insights and streamline advisor workflows.
- Built and deployed service advisor AI assistants using Google ADK and Model Armor, hosted on Cloud Run and orchestrated with Kubernetes for scalable, production-grade serving.
- Developed agentic AI pipelines integrating multiple enterprise systems to summarize vehicle issues, warranty insights, and recall information for service advisors.
- Designed and deployed machine learning models to forecast demand, and built MLOps pipelines to serve API services and MCP servers for production AI solutions.
- Built robust AI agent evaluation pipelines integrating Guardrails for safety, reliability and compliance, deployed on Kubernetes for scalable production serving..

Data Scientist, Chennai Jan 2023 - Aug 2024

- Collaborated with the Supply Chain Analytics team to architect and execute highly efficient data-driven pipelines, allowing real-time monitoring and optimization of supply chain operations, and later supporting customer service analytics solutions.
- Conducted advanced analytics on supply chain and connected vehicle data, uncovering trends that improved inventory management and supported pricing and service decisions.
- Built agentic AI based pipelines to optimize audit processes, including AI agents to review amortization documentation, validate contracts with backend data sources, and highlight overpayment scenarios generating \$100M in value.
- Designed and deployed interactive KPI dashboards using Qlik Sense, Power BI, and Plotly Dash, enabling real-time supply chain visibility and data-driven stakeholder reporting.
- Implemented model monitoring and observability using Arize Phoenix to track model drift, performance degradation, and ensure reliability of deployed ML models in production.

Nagarro, DevOps Engineer, Lucknow

(9 months) May 2022 – Jan 2023

- Integrated pipelines with Azure Cloud, AWS Cloud, and Google Cloud services, thereby automating application deployment and infrastructure management which led to a significant increase in team efficiency and a marked reduction in deployment errors.
- Built Infrastructure as Code (IaC) principles to create Terraform scripts, enabling automated creation and configuration of cloud infrastructure. This initiative prompted easy replication and standardization of environments, enhancing operational efficiency.
- Transformed the system architecture by designing and implementing containerization solutions with Docker and Kubernetes, leading to a 35% improvement in scalability and resource utilization.
- Implemented continuous integration and continuous delivery (CI/CD) pipelines using Jenkins and Git, reducing the code integration time and improving code quality by 40%.

## SKILLS

---

Technical Skills: Automation, data analysis, data modeling, data pipelines, database management, data architecture, data engineering, high-performance computing, cloud computing, applied machine learning, AWS cloud, Google Cloud Platform, Jenkins, CI/CD pipeline.

Programming Skills: Python, R, SQL, HTML, JavaScript, Java, CSS, BigQuery, Terraform.

Frameworks & Tools: Git, Fast-API, Torch, Langchain, Google ADK, Arize, TensorFlow, Django, Flask, pandas, numpy, StreamLit, Plotly-Dash, matplotlib, Airflow, DBT, Tableau, Qlik Sense, Power BI, JIRA, Docker, Kubernetes.

## CONTRIBUTIONS AND RESEARCH

---

@Byte-Sized-Brilliance-AI ( Start-up Initiative ) @GeeksForGeeks

Feb 2025 - Present

- Founder and Author @Byte-Sized-Brilliance-AI, an AI-first blog site providing articles from basic maths behind machine learning algorithms to Agent based AI systems. Contributed 30+ articles and counting. [\[Link\]](#)
- Technical Writer @Geeks-for-Geeks with 15+ articles, focused on topics related to Python, R, and Machine Learning. [\[Link\]](#)

Automated-Document-Parser – (PYPI – Open Source module)

- A document parsing module that helps in ingestion of Documents and information from other data objects to help building RAG pipeline. The module is active on PYPI can be installed using pip [\[Link\]](#)

Sketch to Face ( Research Paper ) [\[Link\]](#)

Nov 2022

- The paper introduces a new method leveraging Generative Adversarial Networks (GANs) for enhanced visual representation tasks.
- The method eliminates the need for specialized artists or manual sketching processes.
- Users can create freehand sketches that serve as input for the model. The GAN model generates coloured images based on the provided sketches.

Glass Identification using XG-Boost ( Research Paper ) [\[Link\]](#)

Aug 2021

- The paper presents a method for analysing the chemical composition of glass particles.
- The method enables the classification and separate analysis of glass fragments based on unique chemical composition.
- Provides valuable information to identify the source and origin of the glass fragments.

## PROJECTS

---

Query Generation Agent [\[Link\]](#)

Agentic-AI, LangGraph, LLMs

- The Automated SQL Query Generation tool that uses Qwen-Coder 7B model with AI agent to interpret user requests, automatically generate and execute SQL queries, and deliver accurate results.

Hindi GPT Neo 2.7B [\[Link\]](#)

LoRA Fine Tuning LLM, Conversational AI

- Integrated lightweight LoRA adapters into GPT-Neo 2.7B fine-tuning pipeline on Wikipedia-sourced Hindi language data, creating an efficient LLM for context aware Hindi conversation.
